-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 10-16 and 23-27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kim et al Pat. No. 5,458,818.

3. Kim discloses injection compression molding (col. 2, lines 18-20) into a cavity which is heated to a temperature lower than a softening temperature of the resin and the resin injected is at least the softening temperature, the compression generates a pressure so that the resin contacts the transfer surface of the cavity, the resin is cooled during the compression so as to compensate for contraction of the resin volume. The contact force of the molding surface of the slide cavity piece exceeding the friction force between the sliding surface and the cavity piece and the mold would have been inherent in Kim since this is required for the slide surface to compress the resin. At least one slide cavity piece is from a porous member (col. 5, line 5). The stamper has concave and convex portion. The stampers are known to be interchangeable so as to forming different products.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1732

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-9 and 17-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al Pat. No. 5,458,818 taken together with Stewart Pat. No. 6,558,590.

6. The reduction of friction between sliding mold portions is taught by Stewart (col. 11, lines 1 and 2). It would have been obvious to reduce the friction between the moving parts in Kim in view of the teaching of Stewart so as to provide a smooth movement between the parts.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jill L. Heitbrink whose telephone number is (571) 272-1199. The examiner can normally be reached on Monday-Friday 9 am -2 pm.
